#1 Activate plugin

In order for your uploaded videos on flowcasts to be accessible for your students, you need to activate the plugin „Aufzeichnungen“ (video recordings) first.

For that, click on Stud.IP on „Mehr...“
Scroll through the options until you find „Aufzeichnungen“ in the category of „Inhalte und Aufgabenstellung“.
#1 Organizing

You will find the plugin underneath the heading „Aufzeichnungen“ in your Stud.IP course.

You can change the order and when your videos will be released on flowcasts with the plugin.

For that, you need to edit the playlist on flowcasts.
#2 Choose a channel

Log in to flowcasts here: [https://flowcasts.uni-hannover.de/login](https://flowcasts.uni-hannover.de/login)

First choose the channel that you want to edit from your courses.
With a click on the channel it expands and you get an overview of it.

To change the order of the videos please click on the pencil icon next to the channel title.

You have the option to edit every single entry, such as the title of a video. For that please click on the pencil icon next to a video.
#3 Manage playlist

In the window „Kanal bearbeiten“ you can alter various settings for a given channel.

To manage the playlist scroll to the bottom of the page.
With a click on “Playliste bearbeiten” you will access the relevant sub-menu.
The upper part represents the already released videos on Stud.IP and the release order.

The lower part of the playlist represents the yet to be released videos. These are not visible yet on Stud.IP.

Via drag & drop you can move a video from the lower to the upper portion and position it accordingly.
After you are happy with your sorting you need to click on the button „Playlist aktualisieren“.
Your videos will afterwards be visible below the menu item „Aufzeichnungen“ on Stud.IP.
